

## THE NCSTA

Our purpose is to advance the standards of septic tank manufacturing, installation, repair and maintenance, by working toward the establishment of a uniform state code containing standards for the design, installation and servicing of septic tank systems.

To establish throughout the state a relationship among all those concerned with the septic tank industry that will increase the flow of information, not only among members of this association, but among all organizations and agencies having allied objects and purposes.

To establish on a statewide basis, a liaison with governmental agencies so that legislation affecting the septic tank industry can be enacted, based upon statistics, facts and actual experience.

To inform and educate the people of North Carolina about the value and safety of septic tanks. To protect and maintain the environment of the State of North Carolina through the use of sound ecological practices in the manufacturing and installation of septic tank systems.
